Terms of Use: Privacy Policy: Apk Mirror 1 : Download APK © 1996, Amazon.com, Inc. ou suas afiliadas Equalizer FX allows you to improve the sound quality of your android device to get more enjoy of listening music. The Equalizer FX program allows you to adjust the sound effect levels so you can get the better out of your music. The application includes: - Equalizer. Sound filter to change the frequency envelope of the sound. - Bass boost. Sound effect to increase or amplify low frequencies of sound. - Virtualization. Sound effect to virtualize audio channels. Let yourself improve the stereo effect. - Loudness Enhancer. Loudness Enhancer is a sound effect to increase music sound. (Only for Android 4.4 and higher) - 12 presets. Also you can create your own presets. The program works with music players and audio streaming services such as Pandora, Spotify, TunesIn Radio, VK, etc. - Equalizer Widgets for the home screen. - Automatically on/off when the music player starts/stops playing music. - Flexible configuration. Note: Equalizer FX does not work with FM radio. Since Android Oreo you can hide the icon via Android settings. To get equalizer work on Lollipop go to application settings and select all applications. Locate the MusicFX application to remove the application data for this application, and then install Equalizer FX. After that when you start music player and select equalizer option new equalizer fx will be available. Page 2 FOLLOW US Equalizer FX (Free) é um equalizador de as para Android. Normalmente, este tipo de opção vem acoplada a um player de música, mas este aplicativo pode alterar o som geral do aparelho. Isso é especialmente útil, pois permite que você aprimore a reprodução de sons de jogos e filmes e não só durante a audição de vídeos. Exatamente por esse motivo, o fato de que o aplicativo oferece perfis prontos apenas para determinados estilos musicais (e sem opções para filmes, por exemplo), é um pouco decepcionante. Por outro lado, Equalizer FX (Free) tem uma bela interface, muito prática e fácil de compreender. Ela segue o padrão Ice cream sandwich, o que garante a sua elegância. O fato de que você pode escutar amostras de músicas enquanto altera o perfil de sons é essencial, pois isso evita que você tenha que recorrer a outro app para fazer os ajustes necessários. De forma geral, Equalizer FX (Free) é um aplicativo que agrada bastante. Ele pode parecer muito simplificado, mas para quem tem o ouvido mais preparado ou tem um conhecimento musical mais apurado ele pode fazer toda a diferença na experiência de ouvir música, ver filmes e jogar com seu Android. Android has always been a bit funny about equalizers. The operating system has been supporting equalizers for a while. But it's still not a good experience. Some music apps have them, and some devices have originals in the settings that work across the system. But a lot of apps like YouTube Music don't, and it's weird to make everything work all the time. Revolution, many bluetooth headphone companion apps adjust the EQ to the headset itself and by passing Android completely. Nevertheless, you have some options if you want to try to EQ device yourself. Here are the best equalizer apps for Android.10 Band EqualizerPrice: Free10 Band Equalizer is exactly what it says it is. An equalizer that has ten bands. That's especially because most people have only five. It adjusts the frequency from 31Hz to 16 kHz and from a range of 10dB to -10dB. The hotel has a built-in music player. However, it should work with most other music players as well. You also get equalizer presets, a volume booster, bass booster, treble booster, and you can adjust left and right balance. It is one of many equalizer apps that you can pick up for free. The only thing missing is a pro version to remove ads. Beans Mobile Music EqualizerPrice: Free/\$1.99Music Equalizer by Beans Mobile is one of the simpler equalizer apps for Android. It has a five-band equalizer along with a bass boost feature, ten presets, themes, optional notification controls, and even widgets. The user interface is simple enough to use, and the bass boost and equalizer work pretty well in most cases. It doesn't work to increase the volume from the speakers or anything super fancy like it. However, it should work with wired headphones just fine. This one is also a little old, so we recommend it only for older devices. Equalizer and Bass BoosterPrice: FreeEqualizer and Bass Booster are quite self-explanatory. It has an equalizer and a bass booster. To be more specific, it includes a five-band equalizer, ten equalizer presets, and a bass booster. The developers say it should work with most music players, vcrs and FM radio. The only big problem is that the app closes sometimes when it's left in the background, and sometimes it doesn't always work. It is one of the simpler equalizer apps, and it should work on most devices. Equalizer FXPrice: Free/\$1.99Equalizer FX is one of the cleaner, more modern equalizer apps. It is exceptionally easy to use. It comes with a five band equalizer, bass boost, virtualization, and even a sound highness enhancer (Android 4.4 and up only). Like most people, it comes with a widget along with presets to get started. The developer has also stated that this should work with most music players, including Spotify, Google Play Music, Pandora and others. The paid version is the same as the free version. It just removes advertising. Music volume EQPrice: FreeMusic Volume EQ and Bass Booster are one of the most popular equalizer apps out there. Fortunately, it actually works pretty well. It includes the standard five band EQ along with nine EQ presets. Along with that, you get volume control, bass amplification, audio device enhancement and more. The developers also boast that it will work well with most video and audio players. All in all, a positive experience for a software equalizer. It obviously won't work with everything and you'll get more from others on this list, but this works fine. It is also completely free as far as we could see. NeutralizerPrice: Free/\$5.00Neutralizer is one of the most unique equalizer apps that we've seen. Instead of giving you an EQ to adjust yourself, it has one that adjusts based on what you like. During setup, you are prompted to listen to sounds at different frequencies. You turn them up or down based on how well you hear them. When you're done, the app automatically generates a unique equalizer preset just for you based on the speakers or headphones you're wearing. The free version allows you to create a preset while the pro version allows you to create as many as you need. If you try this, we recommend that you redo the sound test with each new set of speakers or headphones you connect to as they produce different results. WaveletPrice: Free/\$5.49Wavelet is the latest equalizer app on the list relatively speaking. It came out in 2020, and it's not half bad. The app includes a 9-band equalizer along with a bunch of different presets if you want to keep it simple. In addition, it includes the ability to automatically EQ to over 2400 different pairs of headphones. The AutoEQ function measures and compensates for the Harman curve for optimal sound. This sounds like an ad, doesn't it? In any case, this is actually very good, and among the best you can get without root access. Viper4Android (root only)Price: FreeViper4Android is, by far, the best of equalizer apps. Unfortunately, it is only for root users. It's been in development for years. It is installed on the system partition, so it has far more control than any of the usual equalizer apps on Google Play. The app also includes a ten-band EQ, tons of presets and settings, effects and more. There is a pain in the back end to install sometimes. But it's totally worth it when you do it. Viper4Android should be compatible with most rooted devices, and many custom ROMs add it by default. It's exceptionally good and we hope that Google will one day give us something like this in Android right. Many music player appsPrice: Free / VariesMany music player apps have equalizers built in. Some notable examples include BlackPlayer, Poweramp, and Neutron Player. These apps have effective equalizers that actually change the sound. However, they only work in the app. Thus, those of you who stream music can't use the equalizers in these apps for your streamed music. On the other hand, those with private collections can use these all day. Music player apps vary in price and functionality. We have a list of our favorites towards the top of the article under the first paragraph. On the device equalizersPrice: Free (usually)Many Android OEMs have EQs in the audio section of settings. Some devices do better than others, but about half of them allow you to adjust audio across the device through an EQ. Usually there is something nearby a 10-band EQ along with some additional things like Dolby Atmos or EQ presets. LG devices with Quad DACs DACs has a 10-band EQ and a completely separate set of presets you can also use. It really depends on what you want, but Samsung and LG tend to do it a little better than the others. CHECK OUT LG QUAD DAC! If we missed some great equalizer apps, tell us about them in the comments below! Thank you for reading! Read!
